

Vessel Survey Checklist

- 12 hours minimum prior to testing:
 - ✓ Switch off & disconnect all shore power leads
 - ✓ Turn all battery switches to the OFF position
 - ✓ Turn all switches to OFF including all AC & DC circuits
 - ✓ Isolate any solar, hydro or wind charging circuits
- If possible, supply plans and drawings of the vessel.
- Where possible, supply any historical data regarding the vessel including maintenance, previous marina locations and previous surrounding vessels (steel, fiberglass, aluminium)
- Preferably the vessel/s should be tested in their 'normal' home or environment. We endeavour to come to you wherever possible to give you the most accurate report due to the importance of environmental influences on testing.
